Screen pilot with field verification

We are looking for three licence holders to run the first field-verified Screen reports. You get a full screening of your licence at pilot price, and the top five targets checked on the ground.

Included

- Free coverage check
- Full Screen report (Turkish and English) with data layers
- Field verification of the top 5 targets by a vetted geologist
- Results meeting and a written field summary

What we ask of you

- Written permission for field visits inside your licence
- A contact person for access and safety on site
- Consent to publish an anonymised case study (optional)

A fair test, agreed in advance

01
Lock
The target list, with coordinates and scores, is time-stamped and shared with you before anyone goes to the field.

02
Check
Each target is visited and recorded as confirmed, partly confirmed, negative or inaccessible, with photos and GPS.

03
Report
Every outcome is reported, misses included. Hit rate is compared with randomly placed control points.

Duration
Report in 5 working days; field checks within 4 weeks, weather permitting.

Price
Pilot price on request, below the standard Screen price.

Priority
Newly awarded licences and areas with hyperspectral coverage.

Apply for a pilot place
Send your licence number and corner coordinates.

info@orerank.com

Targets are indicators for field verification, not mineral resources or reserves. Field work only with the licence holder's written permission and under the partner's insurance.
